

In-Class Assignment: ensemble models

Please answer the following questions.

please refer to the [ensemble_learning_and_random_forests.ipynb](#)

Question 1:

What was the validation set score for the VotingClassifier before the svm_clf was removed?

Question 2:

What was the Out-of-Bag (OOB) score for the BaggingClassifier trained with oob_score=True?

Question 3:

For the Iris dataset example, which feature was deemed most important by the RandomForestClassifier?

Question 4:

What are two reasons why the StackingClassifier outperformed the custom stacking implementation?
