

In-Class Assignment: Image Classification using SVM.ipynb

Please answer the following questions.

please refer to the [Copy of Image Classification using SVM.ipynb](#)

Question 1:

In this image classification colab file, how many categories of images are being classified?

Question 2:

Based on the data preprocessing code, what numerical label is assigned to each image category?

Question 3:

What pixel size are the downloaded images resized to during the preprocessing step?

Question 4:

What was the final accuracy score (in percentage) of this model?

Question 5:

After splitting the data into training and test sets, what are the dimensions (number of samples and number of features) of the input training data (x_train) respectively?

<Hint: Look for the print statements that show the 'Dimensions' of the training and testing data after the train_test_split function is called.>
